Measurements taken on 3-27-2017

Color: Bb = blk red carrier, BB = homo-blk, RB = red baldy, Hfd = Hereford

H/P/S: Horned, Polled, or Scurred

A2: beta-casin found in milk (see the link on our Sires page for more info)

Our bulls fertility tested extremely well again this year. This type of consistency shows the quality of the bulls being offered. Each bull passed a rigorous test and we provide you with all the information, even for our herd sires. There are no, "well, he should be ok" bulls. We measure scrotal size with a tight tape. There are no fat deposits in these scrotals to inflate the measurements. Don't be fooled by fat-inflated scotal measurements. The bulls are fleshy and in breeding shape, not slaughter steer shape.

We have never had a positive Trich test, but we know many areas require bulls to be tested. For your convenience, we test them for you. If you have any questions about the fertility test results, feel free to contact Dr. Jim Bridle, DVM at (307) 856-0550. He will be happy to talk with you.
